

pressure monitoring

water pressure and water hammer monitoring

Melbourne / Australia

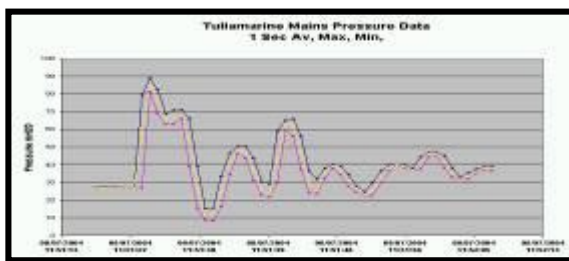

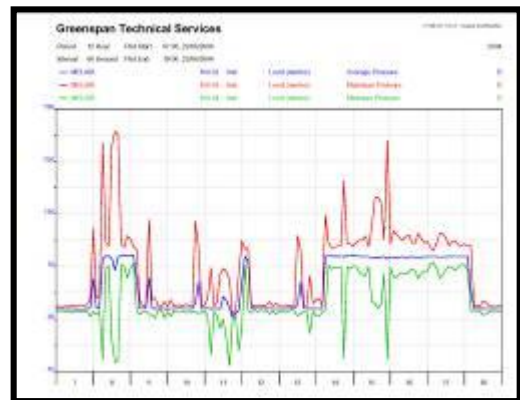

project summary

Greenspan provides a range of pressure and flow monitoring services for Water & Waste Water Systems. GHD Melbourne have engaged Greenspan to provide data collection projects for several projects including monitoring of a network of pressure monitoring sites through the peak summer demand period for the Philip Island water supply system and the collection of high frequency water pressure data in a pipeline which had suffered a number of failures due to Water Hammer Effects. Information from the projects was used in the development and calibration of water supply network models

project features

- Pressure Sensor & Data Loggers
- Flow & Velocity Sensors
- Field Installation & Servicing
- Data Collection & Reporting
- High Speed Water Hammer Logger

tyco / Flow Control / **Environmental Systems**
